

Polar fit view: radius = distance from the correlation line (|residual|)
center = perfectly predicted by the truth rating | tight bullseye = strong correlation, spread ring = weak | angle = truth rating (1-7)

cold (not informed)

GIST truth $r = -0.79$
mean |residual| = 0.82 (tighter = stronger)

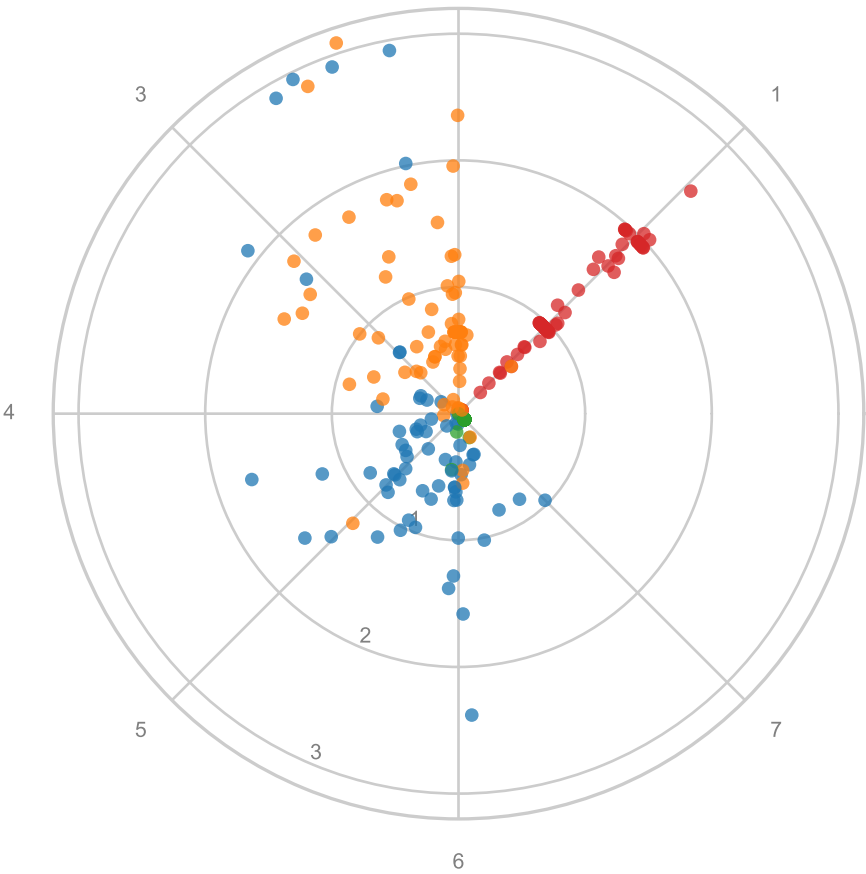

VERBATIM truth $r = -0.58$
mean |residual| = 1.29 (tighter = stronger)

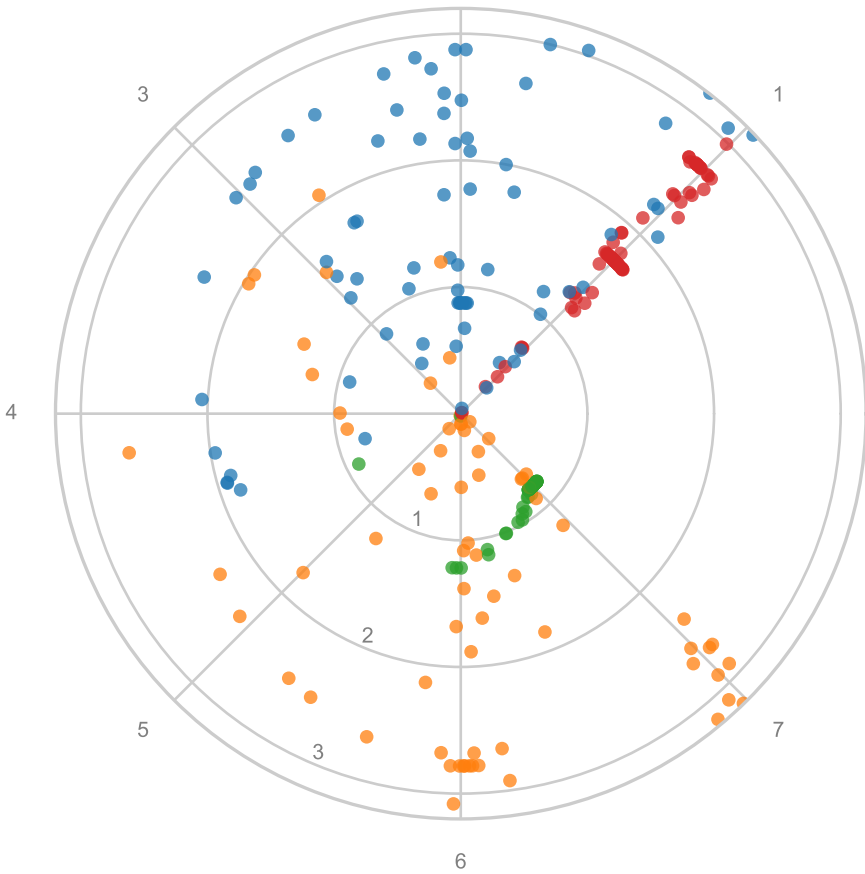

informed (ground truth given)

GIST truth $r = -0.81$
mean |residual| = 0.83 (tighter = stronger)

VERBATIM truth $r = -0.51$
mean |residual| = 1.55 (tighter = stronger)

Whole truth Palter Truthy falsehood Blatant
